

HARSHITHA G

Shimoga, Karnataka | harshithachinmai@gmail.com | linkedin.com/in/harshitha | github.com/harshitha53647

EDUCATION

Sapthagiri NPS University

Bachelor of Artificial Intelligence & Machine Learning
CGPA: 8.72

Bangalore, KA
Oct 2024 – Present

Adichunchanagiri PU College

Pre-University Course (PUC)
Percentage: 93.83%

Shimoga, KA
June 2022 – March 2024

Loyola English High School

Secondary School Leaving Certificate (SSLC)
Percentage: 90.88%

Shimoga, KA
June 2021 – March 2022

PROJECTS

Voice4Blind AI Assistant | Python, NLP, Speech Recognition, Streamlit | May 2026

- Developed a voice-controlled AI assistant to help visually impaired users access and navigate digital documents hands-free.
- Implemented Speech-to-Text, Text-to-Speech, document processing, and AI-based text summarization features.
- Added support for PDF and Word documents with voice-based navigation and multilingual interaction.
- Presented the project at the Voice4Blind Hackathon as an accessibility-focused AI solution.

FairAI – AI Fairness Checker | Python, Pandas, Streamlit, Matplotlib | May 2026

- Developed a data analysis application to identify and evaluate bias and fairness in automated decision-making systems.
- Implemented fairness metrics and comparative analysis to identify disparities across sensitive attributes.
- Built interactive dashboards and visualizations using Pandas, Matplotlib, and Streamlit.
- Presented the solution during the Build with AI Solution Challenge.

Karnataka Traffic Accident Analysis Dashboard | Power BI, Data Visualization | Feb 2026

- Developed an interactive Power BI dashboard to analyze Karnataka traffic accident data and identify accident trends.
- Created visual reports for district-wise accident distribution, collision patterns, and road-condition analysis.
- Used data visualization techniques to present accident patterns and support data-driven insights.

Smart Blind Stick | Arduino, Ultrasonic Sensor, Water Sensor, IoT | June 2026

- Developed an Arduino-based assistive IoT device to help visually impaired users detect obstacles and water hazards.
- Integrated ultrasonic and water sensors with a buzzer and vibration motor for real-time alerts.
- Designed and tested the system for obstacle and water detection to improve walking safety.

Autonomous Car | Arduino, Ultrasonic Sensor, Hardware Integration | Jan 2025

- Developed an Arduino-based autonomous vehicle prototype using ultrasonic sensors for obstacle detection and avoidance.
- Integrated sensors with real-time control logic to enable automated navigation and obstacle avoidance.

TECHNICAL SKILLS

Programming Languages: Python, Java

Data Analysis & Visualization: Pandas, Matplotlib, Power BI, Data Visualization

AI/ML & NLP: Natural Language Processing (NLP), Speech Recognition, Text Summarization, AI Applications

Web Technologies: HTML, CSS

Frameworks & Tools: Streamlit, Figma, Arduino IDE

Hardware & IoT: Arduino, Ultrasonic Sensors, Water Sensors, Embedded Systems, Sensor Integration

Core Concepts: Data Structures & Algorithms, UI/UX Design, Data Analysis, Problem Solving
